ABSTRACT. A new name *Neoaulonastus* is proposed for the genus *Dissonus* SKORACKI, 1999 not Wilson, 1906.

Key words: acarology, taxonomy, nomenclature, homonymy, new name, Syringophilidae, *Dissonus*, quill mites,.

In 1999 the author erected a new genus based on a new species of quill mite *Dissonus scirpaceus* from Eurasian Reed Warbler *Acrocephalus scirpaceus* (Passeriformes: Sylviidae) (SKORACKI 1999). Unfortunately the name *Dissonus* had been preoccupied by a genus of Crustacea (Copepoda: Siphonostomatoida) by WILSON in 1906 as listed in NEAVE (1939). At time the name *Neoaulonastus* is proposed for *Dissonus*.

***Neoaulonastus*, new name**

ETYMOLOGY

From Neo (Gr. – new) and *Aulonastus* - a genus of Syringophilidae closely related to *Neoaulonastus*.

ACKNOWLEDGEMENTS

I am grateful to Dr. JOHN K. PAGE (Production Section Chief of Zoological Record, England) and Dr. ANDRE V. BOCHKOV (Zoological Institute, Russian Academy of Sciences, St. Petersburg, Russia) for alerting me to this homonymy.
